AMENDMENT

Sir:

Responsive to the Office Action mailed November 6, 2001 in the above-identified application, please enter the following Amendment:

IN THE ABSTRACT:

Delete the Abstract in its entirety and substitute the following:

- A device is provided to detect optical signals by generating at least one reference light ray which has frequency shift and/or frequency modulation or phase shift and/or phase modulation and/or time displacement over the optical signal to be detected, with the optical signal to be detected and/or the reference light ray(s) being alignable in such a way that they can be brought into interference. At least one detector is provided with a demodulator by which amplitude modulation can be detected. A high spectral resolution is achieved even when small optical elements are used by at least
